welcome to curtains up®

Alhambra Hardware Company Inc. designs and manufactures Curtains Up® distinctive drapery hardware to meet the needs of the discriminating and design-conscious consumer. Since entering the market in 1993, Curtains Up® has become the premier line of decorative drapery hardware in North America, serving designers and specialty trade retailers. We have succeeded in re-creating the past with designs that are both graceful and bold. But watch out for some surprising and innovative departures!

The Curtains Up® line has evolved to include an extensive selection of materials, styles, finishes and accessories. Designs range from the traditional and historic to the contemporary and avant-garde. The Cast Metal Collection consists of cast iron and cast aluminum finials that are traditional in style, evoking memories of centuries past. The Forged Iron Collection, with finial designs fabricated from iron and steel bar, lends itself to contemporary décor, while still revealing its historic roots. The Bravo Cast Resin Collection features custom designed finials adapted from heritage references, cast in polyresin and hand finished in a variety of elegant antique finishes. Each collection offers a complementary range of tiebacks, rosettes, steel rods and rings.

With this catalog we hope to make your product selection easier by providing you with clear images of our finials along with photographs and descriptions of each of our many well-designed accessories. In fact, the variety of accessories available for use with Curtains Up® finials makes our collection one of the most versatile on the market today, helping you provide innovative window treatment solutions for your clients.

To enhance the value of the striking color photography, you will find a quick reference color chart at the end of this catalog. There are also individual icons of each finial design together with size and finish specifications. While Curtains Up® has been organized into design collections, this should not limit you in any way. Most parts are interchangeable across collections. Feel free to mix and match to your heart's desire!

Please use this catalog to its fullest extent. By providing you with information about the benefits and value of Curtains Up®, we are confident that the planning and decision-making process for you and for your clients has been simplified.

inspired

The Bravo Cast Resin Collection is the premier design group of Curtains Up®. An extensive variety of finial styles, finishes and sizes allows the designer to be as bold or as subtle as desired. Bravo succeeds especially well when the decorative drapery hardware is chosen as an integral component of the overall window treatment. This collection has responded to market trends with larger diameter rods. Bravo now features 2" diameter rods in lengths up to 10'.

The use of polyresin as the material for Bravo finial construction has enabled our designers to create intricately molded details. These designs perfectly emulate the effect of wood and stone carvers through the ages, resulting in a handcrafted, naturalistic look. Our hand-application of new formula paint finishes also means strong and durable colors. These characteristics create a look of individuality across the collection.

Bravo finials are featured in settings as diverse as Colonial Williamsburg, small boutique hotels, elegant restaurants and of course, private residences.

R500 - ROSETTES 32/20/22

Curtains Up® is proud to offer Arts & Crafts Designs – an evocative range of finials and tiebacks that complements the look and feel of the Arts & Crafts movement. Arts & Crafts design inspires a strong following among those who are interested in a clean, unadorned look. Bursting forth in the earliest part of the 20th century as a reaction to over-developed Victoriana, Arts & Crafts manifested itself in many forms in the United States, Canada and abroad. From the cooperative workshops of William Morris to the serenity of the Craftsman school, these designs reflect a return to simpler ideas, honest craftsmanship and sturdy ornamentation.

The Art Nouveau Flower is perhaps the most recognizable design in the group. Hand-applied finishes accent the flowing contours of this finial's surface. The Mission design mirrors the hammered hardware often found on Stickley and other production furniture of this period. The Ball finial is one of our most popular designs. Its simplicity makes it universally fitting for all window treatments, but particularly for this design period. The Prairie design, in cast resin, is the largest in the group, elaborating the square shape to produce a truly elegant architectural form.

historic

The Cast Metal Collection is where Curtains Up® began. Based on historic iron castings that have been adapted for use as finials, tiebacks and rosettes, this collection continues to develop and mature in sophistication. In combination with dozens of accessories, the cast metal finial designs can be used to achieve a diversity of window treatments, from the simplest to the most complex.

These finials, cast in either iron or aluminum, are specially treated to ensure durability. Most are available with additional hand finishing in heritage copper and heritage gold. Style trends run from the rustic black iron arrows to the lush heritage copper Fleur de Lys motif. Each has its own place in the window décor repertoire.

R500 - ROSETTES 32/20/22

time-honored

The Forged Iron Collection offers several clean, simple, yet sophisticated designs that have evolved from the 18th and 19th centuries. Hand and machine forging has come a long way since the days of the village blacksmith. New techniques in production have enabled us to create high quality forgings that approximate the time-honored creations of yesterday at very competitive prices. Through the application of modern finishing techniques we have been able to update these looks so that they blend well with traditional and contemporary décor and enhance both residential and commercial environments.

free-flowing

Nuages™ Designs is a bold flight into contemporary décor for the Curtains Up® line. The unique, free-flowing finial shapes, fabricated in sharply defined cast aluminum, are light, airy and graceful.

The application of satin lacquer softens the crisp edges and further emphasizes the elegance of the look. Vortex, Stratus, Nimbus and Cumulus are named to reflect those atmospheric sensations that have inspired these designs. Nuages™ successfully delivers the elements of contemporary European design to North America.

Curtains Up® boasts an ever-expanding range of accessory items to facilitate the installation of standard and specialized window treatments. Accessories are designed, sized and color-matched to complement all Curtains Up® collections.

accessories...

Tiebacks

All finials from the Cast Metal and Forged Metal Collections that are available for 1/2" rods may also be purchased as tiebacks. These finials come with our standard, color-matched hoop bracket and connect to the wall as tiebacks. Sold individually, the tiebacks have a 4" offset.

CTB100 - CORDED TASSEL TIEBACKS

Corded tassel tiebacks

This elegant range of six color-coordinated tassel tiebacks complements most Curtains Up® finishes. A small hand-finished resin collar forms the core of the tieback, while woven multi-colored, silken threads pick up the shading of the various finishes.

A wonderful alternative to the traditional metal or resin tiebacks. (10" from top of collar to bottom of tassel). Sold individually.

Apollo tiebacks

This circular cast iron medallion (2¾" diameter) is available in most cast and forged metal finishes. It is modeled from an architectural detail in a 19th century New York City theatre. This tieback coordinates with telescopic posts, in two lengths. Sold individually.

BRTS (short) adjusts 2¾" - 5½"

BRT (long) adjusts 4¼" - 7½"

Bravo floral tiebacks

Bravo's floral tieback is an elegantly fashioned, traditional design that complements the floral rosettes. The floral tieback can also stand alone as an individual design element, to enhance many treatments. The post (4" proj.) has concealed screws in the base, making for an unobtrusive and secure mounting. Sold individually.

Cast iron loop brackets

The loop bracket offers an additional support system for mounting Curtains Up® rods. Loop brackets for 1", 1½" and 2" diameter rods are supported by telescopic posts (sold separately), which are available in two lengths (BRT or BRTS). Particularly useful when a clean, adjustable ceiling mount is required, loop brackets and posts are offered in most finishes.

Steel loop brackets

Machined steel loop brackets for 1" (25 mm) rods. Adjustable projection 3" - 3½" (76 mm - 89 mm). Sold with post.

Fling rods

These simple steel rods measure 40" long, including the comfortable handle. A small clip attaches the top end to the first ring on the curtain. This permits easy movement of the curtain across the rod for opening and closing. It results in less wear and tear on the fabric and on the rod and ring system. Fling rods are available to match most finishes. They are both stylish and practical.

Wall flanges

For situations requiring rods to be flush-mounted inside window frames or against walls, the wall flange securely locks the rod into place. Wall flanges are sold in pairs, with necessary hardware. Available in most finishes. Deluxe wall flanges for 1" rods are also available.

End caps

Neat fitting end caps cover the exposed rod opening when no finial is suitable. This may be by necessity (no space for a finial) or by choice. End caps are sold in pairs and finished to match the rod.

Rosettes

The rosette is a decorative means of locking the rod into the bracket. Rosettes are sold individually, and are often used by designers independently, in innovative ways, to very effective ends.

wood poles / loop brackets / end cap

Curtains Up® rods

Curtains Up® rods are made from heavy 18 gauge steel and finished to coordinate with the finials. Our rods are stronger than most commonly available in the industry permitting installations without intermediate support over longer spans. Standard lengths are 48", 96" and 120". Standard diameters are ½", 1", 1½" and 2". Rods can be connected to form any length by means of an **inner splice**. This small splice (approx. 12") slides inside the two connecting rods and holds them in place when mounted into standard support brackets.

An **intermediate support bracket** is suggested for rods 8' and longer. The number of additional support brackets will depend on the weight of the treatment, as well as the length and diameter of the rod.

Rods may be easily cut on site with a hacksaw or a tube cutter. Caution must be taken when using the tube cutter so as not to damage the finish with the compression.

Telescopic rods measuring 48" - 90" are available in some finishes in ½" and 1" diameters.

Unique plastic plug system

All Bravo finials are manufactured with a strong, threaded screw connection. This screw easily threads into plastic plugs that securely fit into the ends of the rods. Measure your rods carefully before tapping the plugs into place, as they are difficult to remove once inserted. Plastic plugs (2) are supplied with all Bravo finial sets in standard sizes: 1", 1½" and 2" diameters.

Plain, reeded and rope wood poles

These hand finished, high quality, solid wood poles coordinate with the entire Curtains Up® line. Ask for the Alhambra Wood Collection brochure.

TIEBACK POST ADAPTER

FLATTENED RINGS

Steel posts

Steel posts, fixed length and telescopic, are available to support rosettes, tiebacks and 1/2" based finials. Short posts, male or female, can be used to create a series of mountings for either rosettes or tieback designs.

Tieback post adapter

This simple machined adapter allows any rosette, metal or resin, to be used in conjunction with our standard 4" projection tieback post.

Bset bracket sets

Bset brackets are adjustable two-piece units. Easy to mount with swing away cup-shaped arms, they are available in sizes 1/2" (12 mm), 1" (25 mm) and 1 1/2" (38 mm).

Standard brackets

Curtains Up® offers 8 sizes of support brackets. Sold individually.

HEAVY DUTY BRACKET BASES AND ARMS

Standard and deluxe rings

Many different sizes, diameters, styles and finishes of rings are available. Rings are sold in 10-pack bags, in the following inside diameters: 1", 1½", 2" and 2½". Standard rings are only available with hanging squeeze clips. Deluxe rings in four sizes have hanging loops. 1½" deluxe rings also come with squeeze clips. Not all styles are available in all finishes. Choose a ring size that is at least ½" larger than the diameter of the rod.

Flattened rings

Flattened rings are made from flat steel stock and offer a stylish variation on our standard and deluxe ring designs. Available in 1" and 1½" inside diameter sizes, in all cast and forged metal finishes. Sold in 10-pack bags.

CORNER ELBOWS

SHOWN AS AN ADJUSTABLE DOUBLE ROD TREATMENT

Heavy-duty brackets

The heavy-duty bracket system provides greater strength for larger diameter rods and heavier drapery treatments. This sturdy system is composed of 2 parts, a base and an adjustable arm. Select the base size (choice of 3) according to the rod size and need for strength. The choice of arms is determined by the rod size and projection required. As an added bonus, adjustable double brackets are easily made by adding an additional slotted arm to a heavy-duty base support. The double brackets can combine two rods of the same or different diameters. Heavy-duty bases and arms are sold separately and are available in most finishes.

Corner elbows

Adjustable corner elbows allow rods to be mounted at angles from 90° to 270° or any point in between. Simple design and heavy-duty construction make these elbows the easiest solution to bay window treatments. Available for 1" (25 mm) and 1½" (38 mm) rods.

The goal of Alhambra Hardware is to ensure that Curtains Up® continues to be the premier designer line of decorative drapery hardware in North America. Our styles, quality, versatility, availability and customer service remain unparalleled in the industry.

This catalog illustrates and explains the extent of the Curtains Up® product line and contains a wealth of information. The better one understands the versatility of the Curtains Up® system, the more successful one's project will be. There are many alternative ideas to those presented in this book. Please ask questions of your Curtains Up® representative to learn more about optional accessories and ways of accomplishing your objectives. The results can be extraordinary!

Curtains Up® system is versatile

Situations, such as bay windows, can be accommodated through the use of standard and custom bends. Corner elbows or standard bends of 90° and 45° are available. Custom bends can be ordered to any angle or configuration. Consult your Curtains Up® representative for advice on your specific requirements.

Double tracking is another possibility for all Curtains Up® rods. This is easily accomplished through the use of a traverse (corded) system available from your hardware supplier. These separate rods can be attached behind the Curtains Up® rod and connected directly to the ring system. This will permit right, left or double traverse movement of your Curtains Up® installation. Consult your installer to determine the best selection of parts.

Curtains Up® has many uses

Over the years we have seen Curtains Up® components used in innovative and creative ways by resourceful and imaginative designers. Our finials and rods stylishly support wall hangings and tapestries. Rosettes, finials and tassel tiebacks are used to great effect to decorate furniture, mirrors and walls. Upholstered headboards in hotels and private homes are mounted with Curtains Up® rods and finials. And deluxe bathroom accessories are created using a selection of Curtains Up® parts. The possibilities are limited only by one's imagination.

Packaging: Curtains Up® products are securely packaged in the most appropriate container, depending on the size and weight of the item. Most finial sets are packaged in pairs, in a rigid cardboard box. Poly-bags are used for some designs, poly-tubes for rods (packed individually), and poly-bags for rings (10 per bag). Brackets and rosettes are packaged and sold separately.

Quick ship program

Alhambra Hardware maintains significant inventory of most Curtains Up® parts so that we can offer prompt delivery to our network of stocking distributors. Our efficient quick ship program ensures that our products are virtually always available to Curtains Up® distributors.

Contract sales

Curtains Up® products are widely used in commercial applications including restaurants and hotels, store displays, model homes and film and theater sets. Please direct inquiries to your sales representative.

Displays

A variety of display configurations is available for in-store or studio use to promote sales of the Curtains Up® line. Please consult your Curtains Up® representative.

A word about Alhambra Hardware

Alhambra Hardware Company Inc. is a privately owned Canadian company, headquartered in Toronto, Ontario. Alhambra Hardware occupies a 40,000 sq.ft. building where most of the design, manufacturing and distribution operations are carried out. Please visit our corporate website at www.alhambra-hardware.com for more information.

Product binder

Ask your sales representative about the comprehensive Curtains Up® product binder, complete with color chips.

48 CHESTNUT

colors + codes

This color chart is designed to serve as a guide for color matching. Every effort has been made to ensure consistency of finish amongst our products. Different methods of finish application onto different materials result in some variation of finish. Most finishes are hand applied providing the unique appearance of Curtains Up®.
